File Edit View Search Terminal Help

```
--lcontext      Display security context.  Enable -l. Lines
                  will probably be too wide for most displays.
-Z, --context    Display security context so it fits on most
                  displays.  Displays only mode, user, group,
                  security context and file name.
--scontext       Display only security context and file name.
--help           display this help and exit
--version        output version information and exit
```

SIZE is an integer and optional unit (example: 10M is 10*1024*1024). Units are K, M, G, T, P, E, Z, Y (powers of 1024) or KB, MB, ... (powers of 1000).

Using color to distinguish file types is disabled both by default and with --color=never. With --color=auto, ls emits color codes only when standard output is connected to a terminal. The LS_COLORS environment variable can change the settings. Use the dircolors command to set it.

Exit status:

- 0 if OK,
- 1 if minor problems (e.g., cannot access subdirectory),
- 2 if serious trouble (e.g., cannot access command-line argument).

GNU coreutils online help: <<http://www.gnu.org/software/coreutils/>>

For complete documentation, run: info coreutils 'ls invocation'
